PIREAN

ROLE PROFILE - DEV/OPS CONSULTANT

Employees and applications; consumers and products; people and devices – we bring them together and help them do business, digitally and securely.

At Pirean, we improve customer engagement, enable workforce productivity and secure access for millions of users every day.

We are looking for a Dev/Ops Consultant to join our team in Canary Wharf.

Overview of the Role

Pirean are increasingly utilizing application release automation principles in customer deployments, as well as into their own "Identity as a Service" environments. This has led to a requirement for Dev Ops focused individuals to join our Managed and Professional Services Teams, as well as working closely with our Software Development function.

As a result, we are looking for Java Engineers who share a passion for DevOps. If you want to work on REST API's developed in Spring but you also have an interest in things like containers, CI, servers and UNIX, then this job might be what you're looking for.

You will be joining a Software and Professional Services company specialising in Identity and Access, Management, with an Agile approach to software development. Currently our products are written in Java, AngularJS, Android and Objective C, and our developers can work on any of these technologies. We need individuals who will work within our Services Team, and operate at the interface between Software Development and customer deployments carried out by Professional Services.

Key Responsibilities

The responsibilities of this role will include (but are not limited to):

- Work with other colleagues to produce high quality software deliverables for internal and external projects;
- To actively participate in the team scrum meetings.;
- Follow and define best practices around software development;
- Take ownership on the Dev Ops part of software development, including things like containerization (Docker) and Continuous Integration (CI);
- Some operational support of Pirean internal environments, and for Pirean staff who support customers;

Skills, Experience & Qualifications

Candidates will have the following skills and experience:

- Excellent Java/Java EE development experience;
- OO Design Patterns and SOLID concepts;
- Source Control (preferably with GIT);
- Experience with Maven/Gradle automation and dependency management;
- Continuous Integration Tools & Processes (preferably with Jenkins);
- Unix shell scripts experience;
- Web application management (HTTP, Certificates, Cookies, Sessions);
- Web application servers (WebSphere, JBoss, Tomcat, etc.);
