

ROLE PROFILE - SENIOR DEVOPS ENGINEER

Employees and applications; consumers and products; people and devices – we bring them together and help them do business, digitally and securely.

At Pirean, we improve customer engagement, enable workforce productivity and secure access for millions of users every day.

We are looking for a Senior Dev/Ops Engineer to join our team in Canary Wharf.

Overview of the Role

We are looking for someone to join our team as a DevOps specialist, working at the forefront of technology. Pirean produces software and solutions for a range of Identity and Access Management scenarios, delivered both on our customers' premises and as an IDaaS cloud offering.

Our current pipeline uses Jenkins, Nexus and Docker and your day-to-day job will be to manage the delivery process, working with developers, the support team and project managers to ensure smooth and reliable results. But the job goes beyond that: you will own the process, and will be expected to bring best practice and the latest technology to bear to incrementally improve and streamline it.

The person we are looking for is someone who is not afraid to roll their sleeves up and get stuck in to the job, but who also has an expert knowledge of build, release and configuration management practice, who can bring this knowledge to bear to mastermind the definition and evolution of our processes into the future.

Key Responsibilities

The person who fills this position could be found doing any one of the following at a given time:

- Release cycle coordination, ownership of builds and deployments, release activities, non-prod environments maintenance, maintenance of documentation
- Designing and implementing services for backup and monitoring
- Design/implementation of necessary build tools and methods to increase release efficiency; implement automated solutions
- Administer, manage, and maintain artefact management systems
- Run pre-release activities and all documentation associated with them
- Implement release deployment standards; troubleshoot and fix compilation or build script issues
- Act as a liaison between development, support, and project teams
- Advocate new tools and processes to continuously improve build and source control efficiency
