

ROLE PROFILE - SENIOR JAVA SOFTWARE ENGINEER

Employees and applications; consumers and products; people If you've been a Java developer for some time now, this might be an interesting opportunity for you. We're looking for people with background in Java development, that want to learn more about our products and extend their development knowledge.

You will be joining a young and enthusiastic team, with an Agile approach to software development. Currently our products are written in Java, AngularJS, Android and Objective C, and our developers can work on either of these technologies. We believe in an approach where everyone can explore other languages or development tasks, as long as their main specialization allows it.

Overview of the Role

The person who fills this position could be found doing any one of the following at a given time:

- Produce high quality software deliverables for external projects
- Participate in the team scrum meetings
- Define best practices around software development
- Take ownership on some of the external deliveries
- Develop new modules for our products
- Review other people's code
- Design solutions

Must Know

- Excellent Java/Java EE development experience;
- OO Design Patterns and SOLID concepts;
- Experience with Maven/Gradle automation and dependency management;
- Continuous Integration Tools & Processes (preferably with Jenkins);
- Unix shell scripts experience
- Web application management (HTTP, Certificates, Cookies, Sessions);
- Web application servers (WebSphere, JBoss, Tomcat, etc.)
- Experience with data notation with XML, XML Schema, JSON;
- Full Project Lifecycle experience across different Methodologies (Agile/ Scrum, Test Driven Development, BDD).

Great to Have

- Dependency Injection with Spring / Spring MVC;
- Security programming knowledge / experience (SSO, Federation, OAuth 1&2, SAML, WS-Security, OpenID, Kerberos, SSL, SCIM);
- Developing Restful web services; and
- Testing Techniques (TDD/BDD)
